DETAILED ACTION

1. Applicant's election of Group I, Specie I (claims 1-2, 4-8, and 15-18) in the reply filed on 06/30/06 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 2 and 16, lines 2-3 and claim 15, lines 9-10 read on Species II-V, see specification, paragraphs [0028] and [0032], so claims 2, and 15-16 do not read on Specie I (figure 1), and claims 17-18 are dependently on claim 15.

Thus, claims 2, and 15-18 are withdrawn from further consideration as being drawn to non-elected subject matter.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "**an information handling system, memory, a processor, a printed circuit board (PCB), a plurality of vias disposed in a printed circuit board claim 1, a PCB having a plurality of layers, claim 8**" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate

prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner suggests to applicant to revise the drawings so it can read on the claimed elements or structure.

Claim Objections

3. Claim 1 is objected to because of the following informalities:

Claim 1, line 2, change "memory" to - - a memory - - for proper reading.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1, and 4-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Barr et al. (U.S. Patent 6,711,814).

Barr et al. discloses a multilayer PCB (10, column 4, lines 20-21) as shown in figures 1-9, comprising:

components (not shown, see column 2, line 9 considered as memory and processor) mounted on the PCB;

a plurality of vias (40, column 4, line 56) disposed in at least one printed circuit board layer, the PCB having pads (132, 134, column 5, line 3) and traces (20, 30), the vias defined by first and second openings on a first and second surfaces of the printed circuit board layer, and at least one side wall connecting the first and second openings and defining a void (the through hole or via 40 extended from top to bottom surface of the PCB layer) therebetween; and a conductive material disposed on a portion of the side wall, the conductive material defining at least one inner-via trace (130, column 5, line 2), the pads and traces are coupled to the inner trace (130).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sherman, Kiani et al., and Teshome et al. disclose related art.
